Diablo Canyon Nuclear Power Plant (DCPP) Exercise

There will be a FEMA evaluated exercise with Diablo Canyon Power Plant (DCPP) on Wednesday, 11/02/16, beginning at approximately 0800 hours and ending at approximately 1400 hours. The focus of the drill is to train staff, evaluate procedures, and identify areas that need improvement. This is part of the formal evaluation process by FEMA for nuclear power emergency preparedness that allows California to demonstrate we can protect the public from an unlikely incident at DCPP. Staff from DCPP and local, state, and federal agencies will be participating. The San Luis Obispo County Emergency Operations Center (EOC) and the State Operations Center will be activated and supported by the California State Warning Center.

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

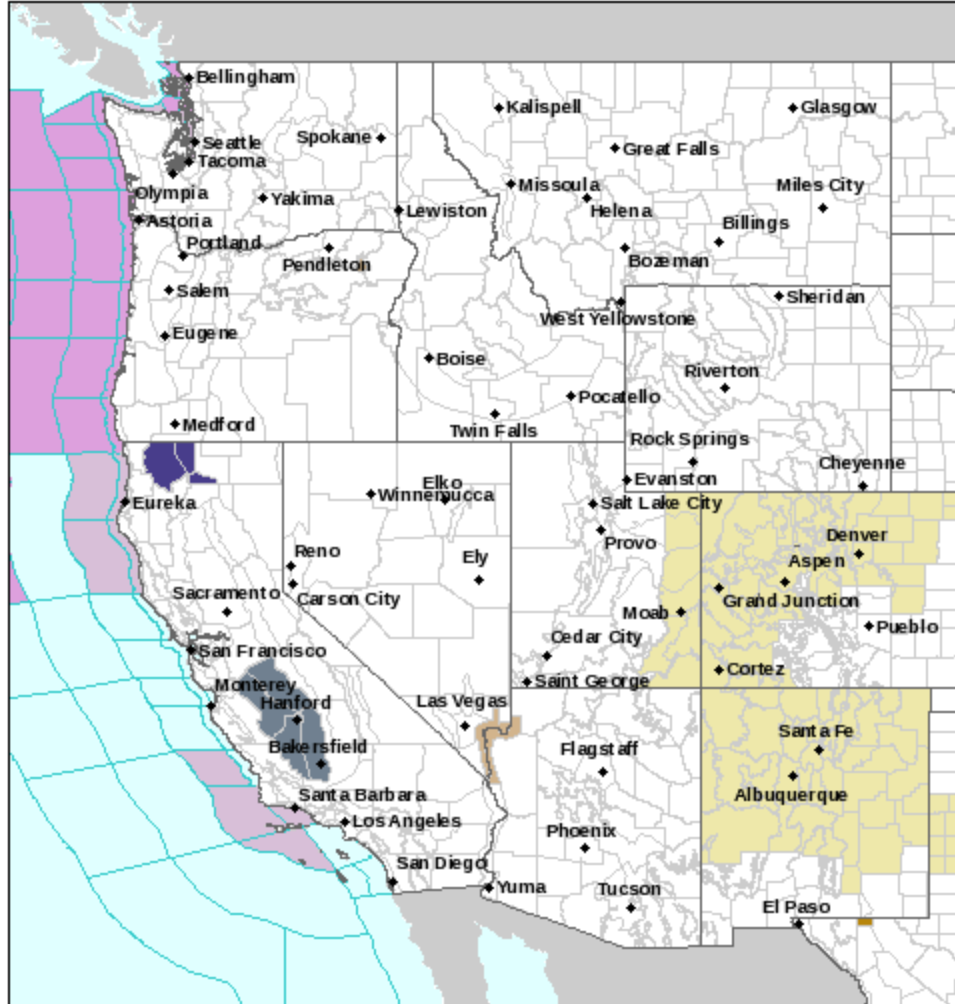

A high pressure ridge is building over the region and the last few rain showers will come to an end in the eastern areas this afternoon. Partly cloudy and mild weather is expected this afternoon through midday Wednesday. A weak front will approach the coast late Wednesday and cause high clouds and southerly winds to increase across the region. Southerly gusts will reach 25-35 mph in wind-prone areas in the north late Wednesday. The front will move into far northwest California Wednesday evening with light rain, but it will stall there and dissipate early Thursday. Fair, mild, and breezy weather can be expected Thursday through Saturday. A stronger frontal system will move onshore early Sunday with moderate to heavy rain, and move fairly quickly across the region, exiting by Sunday evening. Snow levels will be 5000-6000 feet on Sunday. High pressure will follow early next week, but more wet weather systems are expected in the second week. Temperatures will warm to around seasonal normals or slightly above this week at around 70 for the warmest inland areas Thursday and Friday.

SOUTHERN CALIFORNIA

A trough over the northern part of the state will take an inland track, reaching central Arizona by Wednesday. This will result in breezy conditions with warmer offshore flow developing for the second half of the week. But today, expect partly cloudy and cool weather to continue over most of the area. A few light showers will be possible across Monterey County and the northern Sierras, mainly this morning. Gusty west to northwest winds of 20-30 mph will develop later today across the Kern County Mountains eastward into the Antelope Valley as well as the Banning Pass. Temperatures will be a few degrees below normal with highs in the upper 60s to mid 70s at lower elevations to 50s in the mountains. Wednesday, north winds of 15-25 mph will be possible in the morning across the I-5 Corridor which will transition to the northeast by afternoon. Additionally, north winds of 20-30 mph will be possible across the Colorado River Valley this afternoon. Northeast winds will increase to 15-25 mph with some gusts to 35 mph Wednesday night across Ventura and northern Los Angeles County. The offshore flow will kick off a warming trend which will last through Friday. Highs across the lower elevations of Southern California will climb into the 85-90 degree range by Thursday and Friday under sunny skies. Lighter offshore winds will last through Friday morning before ending by afternoon. Slightly cooler weather is expected this weekend as the low over the Southwest departs the area. No significant precipitation is expected the next 7 days.
